

INVESTOR MEMO

Coin Railz LLC — AI Agent Payment Infrastructure

Overview

Coin Railz is a production-ready payment infrastructure platform that enables autonomous AI agents to discover, pay for, and consume services using crypto and credits — without custom integrations.

We are an **early infrastructure provider** in the emerging AI agent economy, supporting:

- **x402 Protocol (Coinbase Bazaar)**
- **Google A2A**
- **MCP (Model Context Protocol)**
- **Solana Actions / Dialect Blinks**

Coin Railz is live, indexed, and processing real payments.

Problem

AI agents are increasingly autonomous — but **they still can't pay**.

Current pain points:

- No standard way for agents to discover paid services
- No native micropayment rails
- Fragmented protocols (EVM, Solana, agent frameworks)
- High friction for developers to monetize agent services

This blocks real economic activity between agents.

Solution

Coin Railz is a unified payment and discovery layer for AI agents.

We provide:

- **41 production x402 services** (trading, compliance, identity, analytics)
- **Solana Actions support** (SOL / USDC / USDT)
- **Instant agent wallet creation via Coinbase CDP**
- **Multiple discovery surfaces** (Bazaar, A2A, MCP, x402scan)
- **Fallback payments** (API credits, Stripe, GPT credits)

Agents can:

1. Discover services
2. Receive a payment challenge
3. Pay on-chain or with credits
4. Consume the service autonomously

No custom integration required.

Traction (Verified)

- **>100 USDC payments** (last 30 days)
- **All payments succeeded** (100% success rate)
- **Repeat paying agents**
- **41 services indexed** by Coinbase Bazaar, x402scan, Google A2A

- **7,400+ external interactions**
- Crawlers confirmed from **Coinbase, Meta, OpenAI, Google**

This is not a demo or testnet.

Differentiation

- **Infrastructure, not a wrapper**
- **Full Coinbase CDP wallet stack**
- **Dual EVM + Solana support**
- **Instant wallet creation for agents** (rare)
- **Live GPT monetization channel**
- **Early mover** — fully operational within days of x402 V2 launch

Most competitors expose a single API.
We operate a **payments + discovery network**.

Market Timing

- x402 Bazaar launched **December 2025**
- Solana Actions adoption accelerating
- AI agents gaining budgets in Q1–Q2 2026
- No dominant payment infrastructure winner yet

This is a **land-grab phase**.

Business Model

- Per-call micropayments (\$0.10–\$2.00)
- Agent wallet provisioning fees
- Enterprise SDK licensing
- Credits (Stripe / GPT)

High-margin infrastructure economics.

Raise

- **Instrument:** SAFE (LLC)
 - **Valuation Cap:** \$10,000,000
 - **Target:** \$500,000
 - **Max:** \$1,000,000
 - **Use of Funds:** distribution, partnerships, infra hardening
