

Coin Railz — Production Metrics Summary

Prepared for Circle Ventures February 2026 Data source: Production PostgreSQL database (verified queries)

1. Platform Overview

Metric	Value	Period
Priced services in catalog	57	Current (shared/pricing.ts)
Total x402 interactions	29,263	All-time (since Nov 3, 2025)
30-day interactions	14,163	Last 30 days
Unique IP addresses	1,233	All-time
30-day unique IPs	719	Last 30 days
Unique services accessed	72	Last 30 days
Error rate	0.62%	Last 30 days (88 / 14,163)

2. Payment & Revenue

2.1 Payment Intents

Status	Count	Amount (USDC)
Succeeded	317	\$262.04
Pending	7	\$3.05
Total	324	\$265.09

2.2 On-Chain USDC Payments

Network	Payments	Revenue (USDC)	Unique Wallets
Base (eip155:8453)	213	\$157.02	1
Base (legacy identifier)	13	\$25.72	1
Total	226	\$182.74	1

Note: The \$182.74 on-chain total represents verified blockchain payments recorded in the [x402_payments](#) table. The \$262.04 payment intent total includes payments processed through all methods (on-chain, credits, API key). The difference (\$79.30) represents non-on-chain settlement methods.

First payment: December 9, 2025 **Most recent payment:** February 18, 2026

2.3 Revenue Context

Revenue to date reflects early-stage infrastructure with a single repeat-paying agent on Base chain. The platform is currently in the discovery and cataloging phase, where crawlers, validators, and registry evaluators are indexing and evaluating services. Payment conversion follows discovery — the current growth trajectory is in inbound discovery traffic, not yet in revenue.

3. Interaction Funnel (30 Days)

Event Type	Count	Description
challenge-issued	13,378	402 payment challenges served
request-complete	306	Service calls completed
authorized	169	Payments authorized
payment-verified	169	Payments verified on-chain
first-call-free	31	Trial access grants
verification-failed	61	Failed payment verifications

error	22	Service errors
-------	----	----------------

Authorization-to-verification rate: 100% of 169 authorized events were subsequently verified on-chain within the 30-day window. **Verification failures:** 61 attempts failed verification (malformed headers, insufficient amounts, or invalid signatures). These represent failed payment attempts, not service errors.

4. Discovery & Cataloging

4.1 Agent Registry

Metric	Value
Total discovered agents	2,411
Discovery sources	21
Registry active since	October 29, 2025
Latest discovery	February 21, 2026

Top discovery sources:

Source	Agents
GitHub (crypto AI repos)	1,278
Coinbase x402 Bazaar	654

ElizaOS Registry	241
Coinbase CDP Wallet	113
A2A Public Registry	102

4.2 Inbound Discovery Traffic

Manifest visitors (/well-known/x402) — last 4 days:

Date	Hits	Unique Visitors
Feb 18	192	150
Feb 19	252	208
Feb 20	277	214
Feb 21	390	341

Trend: +127% unique visitors over 4 days (150 → 341)

4.3 Endpoint Hit Summary (since Jan 26, 2026)

Metric	Value
Total endpoint hits	5,830

Unique visitors	5,245
Unique user agents	57

4.4 Active Discovery Crawlers

Crawler	Description	Status
Coinbase Bazaar (python-httpx)	Primary x402 ecosystem indexer	Active daily
Meta/Facebook (meta-externalagent)	Social graph cataloging	Cataloging 24+ services
AgentIndex-Validator	Agent registry validator	61 unique visitors/12h
Waggle	Agent discovery network	30 unique visitors/12h
GPTBot	OpenAI crawler	Active
AhrefsBot	SEO backlink indexer	Active
SemrushBot	Commercial SEO platform	Active

SERankingBot	Backlink analysis	Active
BotHub A2A Scanner	A2A protocol evaluator	First appearance Feb 21
hol.org registry-broker	Agent registry listing eval	Daily since Feb 17

5. Service Performance

5.1 Latency (30-Day)

Percentile	Latency
p50 (median)	1 ms
p95	1,612 ms
p99	5,549 ms

Note: p95/p99 include services that make external API calls (satellite data from NASA/ESA, prediction market data from Polymarket/Kalshi). Core infrastructure services (ping, gas-price-oracle, token-metadata) respond consistently under 3ms.

5.2 Top Services by Interaction Volume (30 Days)

Service	Interactions	Category
---------	--------------	----------

gas-price-oracle	2,356	Trading Intelligence
ping	2,342	Discovery
token-metadata	2,315	Trading Intelligence
polymarket-search	1,097	Prediction Markets
polymarket-odds	918	Prediction Markets
dex-liquidity	904	Trading Intelligence
contract-scan	231	Infrastructure
transaction-builder	230	Infrastructure
agent-create-wallet	219	Infrastructure
trending-tokens	191	Trading Intelligence

6. 14-Day Interaction Trend

Date	Interactions	Unique IPs	Services Accessed
Feb 7	799	46	43
Feb 8	1,337	47	66
Feb 9	312	34	27
Feb 10	291	51	10
Feb 11	132	25	30
Feb 12	711	79	31
Feb 13	468	45	16
Feb 14	510	39	44
Feb 15	333	27	20
Feb 16	336	18	29
Feb 17	496	49	24
Feb 18	536	61	40
Feb 19	485	79	35

Feb 20	321	46	43
Feb 21	300	39	37

14-day average: 494 interactions/day, 46 unique IPs/day

7. Multi-Chain Coverage

7.1 Chains with Active Payment Support

Chain	USDC Support	USDT Support	Settlement Status
Base (eip155:8453)	Yes	Yes	Primary — \$182.74 USDC settled on-chain
Ethereum (eip155:1)	Yes	Yes	Payment verification configured
Polygon (eip155:137)	Yes	Yes	Payment verification configured
Arbitrum (eip155:42161)	Yes	Yes	Payment verification configured

Solana	Yes	Yes	Via Solana Actions / Dialect integration
--------	-----	-----	--

Note: Base is the only chain with completed external payment transactions to date. Other chains have payment acceptance infrastructure deployed (USDC contract addresses, verification logic) but have not yet received external agent payments.

7.2 Fiat On-Ramp Networks (Transak)

Network	USDC	USDT
Ethereum	Yes	Yes
Base	Yes	Yes
Polygon	Yes	Yes
Arbitrum	Yes	Yes
Optimism	Yes	Yes
Tron	—	Yes

8. Client Diversity (All-Time Top User Agents)

Client	Interactions	Unique IPs	Type
--------	--------------	------------	------

python-httpx (Bazaar)	14,941	821	Ecosystem crawler
Node.js clients	4,314	310	AI agents
curl	3,592	139	Developer testing
zauthx402-agent	1,319	136	x402 autonomous agent
Meta/Facebook	697	67	Social graph crawler
Go HTTP clients	253	22	AI agents
XGate-HealthC heck	213	83	Service validator
GPTBot (OpenAI)	212	32	AI crawler
AhrefsBot	142	38	SEO crawler
SeznamBot	137	39	Search engine

9. USDC Velocity Potential

9.1 Current Transaction Economics

- **Weighted average service price:** \$0.33 USDC (computed from 30-day interaction volume × service pricing from `shared/pricing.ts`)
- **Price range:** \$0.025 (IoT sensor reading) to \$10.00 (smart contract audit)
- **30-day challenge volume:** 13,378 payment challenges served
- **Implied demand at full conversion:** 13,378 challenges × \$0.33 weighted avg = ~\$4,415 USDC potential monthly volume

9.2 Illustrative Scenarios

The following are illustrative scenarios, not projections. Actual conversion rates will depend on agent payment infrastructure maturity and wallet provisioning adoption.

Metric	Current	10x Traffic	100x Traffic
Monthly interactions	14,163	141,630	1,416,300
Monthly USDC volume (at current ~1.2% conversion)	\$262	\$2,620	\$26,200
Monthly USDC volume (at 5% conversion)	\$2,208	\$22,075	\$220,750
Monthly USDC volume (at 15% conversion)	\$6,623	\$66,225	\$662,250

Note: Current conversion rate is approximately 1.2% (169 payments / 14,163 interactions). The 13,378 monthly payment challenges represent addressable demand currently in the discovery/evaluation phase. Most current traffic is from ecosystem crawlers and validators, not transacting agents.

10. Data Verification

All metrics in this document were extracted directly from the production PostgreSQL database using SQL queries against the following tables:

- `x402_interactions` — Primary interaction and funnel tracking
- `x402_payment_intents` — Payment intent ledger
- `x402_payments` — Completed on-chain payments
- `discovered_agents` — Agent registry
- `endpoint_hits` — Discovery endpoint tracking

Queries are reproducible and can be verified against the live database upon request.
